Comprehension: In the following passage, some words have been deleted. Read the passage carefully and select the most appropriate option to fill in each blank. As the education of girls becomes similar (1)_____ that of boys, their home life will also become similar. Their present greater (2)_____ of domestic affairs will also disappear. After age, boys and girls should have a share in parental occupations and (4) but not in excess as it would interfere with their education. Yet, (5) of the problems of adult life helps boys and girls understand and appreciate the efforts of their parents. SubQuestion No: 20 Q.20 Select the most appropriate option to fill in blank no. 5. X 1. aloofness Ans X 2. attentiveness X 3. alertness 4. awareness Question ID: 65497839575 Status: Not Answered Chosen Option: --

Comprehension:

Read the given passage and answer the questions that follow.

Floods are not new to India and this sub-continent, but in recent years the problem has received much greater attention perhaps largely because it has led to much greater damage than in the past. Even though information on the impending occurrence of floods is now more accurate and certainly timelier, often there is very little time or support infrastructure in place by which damage can be minimised. This is particularly true in the case of flash floods resulting from sudden and excessively heavy rain.

In the case of India, flooding is very much a function of the seasonal nature of our rainfall. The monsoons are spread over a short period during the year and often bring a concentrated volume of rain, which cannot be absorbed by the earth and finds outlet only in the form of streams that join up with our major river systems. But, flooding is not confined only to the main rivers of the country, often smaller tributaries and streams can cause heavy damage as well. Once these streams spill over their banks they could cause excessive harm, mainly because those living near the banks of these streams particularly in mountain areas do not have easy recourse to moving away quickly.

One major factor that could lead to a higher severity of flooding in the future is the danger of climate change. While the evidence of the nature of impacts resulting from climate change on precipitation and flooding at the regional level is not entirely clear, it could happen that the Indian subcontinent witnesses and suffers the effects of a significantly changed pattern of monsoons. One set of scientists has estimated that the monsoons could be shorter in duration, but far more intensive. In other words, much greater precipitation would take place in a much shorter period of time, thereby increasing the danger of floods. Climate change is the result of human actions through the increased concentration of greenhouse gases in the atmosphere, of which carbon dioxide is the most prominent.

At the local level also human actions have heightened the danger of flood through the cutting of trees in the mountains as well as in the plains. In the case of India, the ecological damage through deforestation of the Himalayas has led to large-scale erosion of the mountain slopes and high levels of siltation. This leads to deposition of silt on the riverbeds in the plains and hence spill-over of water whenever the volume in the river reaches a certain level. With siltation on the river beds, flooding occurs even at very shallow water levels. However, even in cases where forecasts have been timely and generally accurate, people have often been reluctant to move away, because in most cases they lack the means and physical options for moving away from a danger zone to one that is relatively safe. In the case of flash floods, forecasts are difficult to make, and often the time available for relief is very short.

SubQuestion No: 21

Q.21 The problem of floods has recently received attention due to:

Ans

1. the severity of damage caused

2. the silt deposition on river beds

X 3. the danger of climate change

X 4. the seasonal nature of floods

Question ID: 65497839475 Status: Answered

4. The speaker was made fun of by the audience.

Question ID: 65497839455 Status: Answered Chosen Option: 2

Comprehension:

Read the given passage and answer the questions that follow.

According to legend, ancient Rome was founded by the two brothers, and demigods Romulus and Remus on 21 April 753 BCE. The legend claims that in an argument over who would rule the city (or, in another version, where the city would be located) Romulus killed Remus and named the city after himself. This story of the founding of Rome is the best known but it is not the only one

Other legends claim the city was named after a woman, Roma who travelled with Aeneas and the other survivors from Troy after that city fell. Upon landing on the banks of the Tiber River, Roma and the other women objected when the men wanted to move on. She led the women in the burning of the Trojan ships and so effectively stranded the Trojan survivors at the site which would eventually become Rome. Aeneas of Troy is featured in this legend and also, famously, in Virgil's Aeneid, as a founder of Rome and the ancestor of Romulus and Remus, thus linking Rome with the grandeur and might which was once Troy.

Still other theories concerning the name of the famous city suggest it came from Rumon, the ancient name for the Tiber River, and was simply a name given to the small trading centre established on its banks or that the name was derived from an Etruscan word, which could have designated one of their settlements.

Originally a small town on the banks of the Tiber, Rome grew in size and strength, early on, through trade. The location of the city provided merchants with an easily navigable waterway on which to traffic their goods. The city was ruled by seven kings, from Romulus to Tarquin, as it grew in size and power. Greek culture and civilisation, which came to Rome via Greek colonies to the south, provided the early Romans with a model on which to build their own culture. From the Greeks they borrowed literacy and religion as well as the fundamentals of architecture.

The Etruscans, to the north, provided a model for trade and urban luxury. Etruria was also well situated for trade and the early Romans either learned the skills of trade from Etruscan example or were taught directly by the Etruscans who made incursions into the area around Rome sometime between 650 and 600 BCE (although their influence was felt much earlier). The extent of the role the Etruscan civilisation played in the development of Roman culture and society is debated but there seems little doubt they had a significant impact at an early stage.

SubQuestion No : 16

Q.16 Etruscans taught the early Romans:

Ans

1. The skills of trade

2. Literacy and religion

3. How to build waterways

X 4. The fundamentals of architecture

Comprehension:

Read the given passage and answer the questions that follow.

What can you call a hobby which teaches so much—in addition to providing fun and pleasure? Stamp collecting helps instruct the collector in geography, biography, history, culture and art. Stamps are miniature gateways to the world.

Stamp collecting has very few rules. You don't have to buy expensive sneakers or rackets to enjoy it. However, there are a few simple things to remember when collecting stamps. First of all, one of the essential rules to remember is that the condition of a stamp is a highly important consideration. Badly torn and mis-handled stamps are not only unpleasant to the eye, but they are worth next to nothing when compared to their undamaged counterparts. Stamps are rated in condition from poor to superb.

A stamp which can be called 'superb' is one of the finest qualities. That means it has perfect centring, brilliant colour and perfect gum. A used stamp can also be called superb, if it is perfectly centred, fresh looking, is lightly cancelled and undamaged. A designation of fine means a stamp without flaws, average centring and gum with light hinge marks. Used stamps designated 'fine' are not quite as fresh and cancels are heavier. 'Good' stamps are those which are off-centre, but fairly attractive. There may be minor defects such as disturbed gum, thin areas and heavy hinge marks. Stamps which fall below these standards should be ignored and are not worth acquiring by the serious collector.

Because their condition is so important -- and stamps are only bits of paper after all -- when handling them it is essential to remember to use caution. The best way to safely handle stamps is with tongs. Stamp tongs come with differently shaped tips, but they all have smooth ends which you can use to pick up a stamp without damaging it.

Because stamps are small, it is often difficult to see all of their minute details with the naked eye. Magnifying glasses help to not only see the design better, but also, in some instances discover small details which can help distinguish one stamp from another. You'll soon learn that there are times when stamps appear to be the same, but are not. Look-alike stamps frequently turn stamp collectors into Sherlock Holmes!

One of the first things you will learn through collecting stamps of other countries is geography, so you may want to get an atlas, globe or world map to help you see where the country is located, or to help locate countries which issued stamps you have in your collection. Several stamp atlases have been published for philatelists; they show 'dead' countries that formerly issued stamps, as well as current nations.

Sometimes, philatelists decide to collect stamps not by country of issue, but because of something else. There are people who collect stamps that are oddly shaped, or items that aren't technically stamps, such as labels and seals. These are commonly called Cinderellas (because they appear to be something they're not). Some people collect revenue stamps, which are used by the country of issue to tax items. Many more people collect stamps according to topic, such as animals, birds, or fish, people on stamps, such as authors or scientists, or sport scenes, flowers, art or crafts, the list of stamp collections by topics is practically endless.

SubQuestion No : 21

Q.21 Damaged stamps are:

Ans X 1. Timeless

X 2. Flawless

X 3. Priceless

4. Worthless

Chosen Option: 1

Comprehension:

Read the given passage and answer the questions that follow.

Agriculture during this modern era is highly susceptible to climate change, land degradation and shrinkage of resources. In this context, the incorporation of sustainable development and technology advancement in agriculture is a necessity. One of the technological advancements in modern agriculture during recent times is drone technology. Drones or unmanned aerial vehicles (UAVs) are remotely controlled air crafts with no human pilot on board. Use of drone technology in agriculture is having a revolutionary impact. Generally, drones consist of a navigation system, GPS, multiple sensors, high quality cameras etc. They enable evidencebased planning and spatial data collection. Major applications of drones in agriculture include: (a) Soil and field analysis: Potential soil quality, nutrient status, soil moisture status can be mapped by obtaining 3D images of field soil. This enables understanding of the heterogeneity of fields, planting patterns to follow and soil management strategies. (b) Crop spraying or spot spraying: This is the most important application of drones. The plant protection spraying is generally done manually or mechanically. The drone facilitated sprays are comparatively cheaper and more effective than the aforementioned methods. It is the best method for spraying operations over a large area especially when handling hazardous chemicals. It is reported that by using drones there was a reduction in herbicide use by 52% in soybean fields

(c) Crop mapping and surveying: Near infrared (NIR) equipped drones can assess plant health. The overall mapping of field helps to understand how well the crop is established in various parts of the field. It can also tell at what stage the crop is. The GPS equipped drones can be a part of precision agriculture. (d) Irrigation monitoring and management: The thermal sensor facility in drones helps to track moisture status of the field. Real-time monitoring of field moisture status helps to take immediate irrigation or drainage actions. The areas that are deficit in moisture can be identified and area specific or need-based management can be done (e) Seed planting: Some drone manufactures are in experimentation to shoot seed material into prepared soil. If it is proven experimentally, then it would be a giant leap in modern agriculture. (f) Crop management assessment: The extent and nature of damage caused by pests, diseases and weeds can be understood by analysing multispectral images captured using drones.

SubQuestion No : 16

Q.16 3D images of field soil help in knowing about:

Ans

✓ 1. soil quality, nutrient status and soil moisture status

X 2. seeds to be planted in various parts of the field

✗ 3. the extent and nature of damage caused by pests, diseases and weeds

X 4. the plant health and the stage of the crop

This enables understanding of the heterogeneity of fields, planting patterns to follow and soil management strategies. (b) Crop spraying or spot spraying: This is the most important application of drones. The plant protection spraying is generally done manually or mechanically. The drone facilitated sprays are comparatively cheaper and more effective than the aforementioned methods. It is the best method for spraying operations over a large area especially when handling hazardous chemicals. It is reported that by using drones there was a reduction in herbicide use by 52% in soybean

(c) Crop mapping and surveying: Near infrared (NIR) equipped drones can assess plant health. The overall mapping of field helps to understand how well the crop is established in various parts of the field. It can also tell at what stage the crop is. The GPS equipped drones can be a part of precision agriculture. (d) Irrigation monitoring and management: The thermal sensor facility in drones helps to track moisture status of the field. Real-time monitoring of field moisture status helps to take immediate irrigation or drainage actions. The areas that are deficit in moisture can be identified and area specific or need-based management can be done (e) Seed planting: Some drone manufactures are in experimentation to shoot seed material into prepared soil. If it is proven experimentally, then it would be a giant leap in modern agriculture. (f) Crop management assessment: The extent and nature of damage caused by pests, diseases and weeds can be understood by analysing multispectral images captured using drones.

SubQuestion No: 18

Q.18 The drones used for assessing the health of plants need to be:

✓ 1. near infrared equipped

2. equipped with 3D cameras

3. equipped with spraying facility

X 4. GPS equipped

Question ID: 65497840541 Status: Answered

Comprehension:

Read the given passage and answer the questions that follow.

Agriculture during this modern era is highly susceptible to climate change, land degradation and shrinkage of resources. In this context, the incorporation of sustainable development and technology advancement in agriculture is a necessity. One of the technological advancements in modern agriculture during recent times is drone technology. Drones or unmanned aerial vehicles (UAVs) are remotely controlled air crafts with no human pilot on board. Use of drone technology in agriculture is having a revolutionary impact. Generally, drones consist of a navigation system, GPS, multiple sensors, high quality cameras etc. They enable evidencebased planning and spatial data collection. Major applications of drones in agriculture include: (a) Soil and field analysis: Potential soil quality, nutrient status, soil moisture status can be mapped by obtaining 3D images of field soil. This enables understanding of the heterogeneity of fields, planting patterns to follow and soil management strategies. (b) Crop spraying or spot spraying: This is the most important application of drones. The plant protection spraying is generally done manually or mechanically. The drone facilitated sprays are comparatively cheaper and more effective than the aforementioned methods. It is the best method for spraying operations over a large area especially when handling hazardous chemicals. It is reported that by using drones there was a reduction in herbicide use by 52% in soybean

(c) Crop mapping and surveying: Near infrared (NIR) equipped drones can assess plant health. SubQuestion No: 19

Q.19 Field analysis and knowing about the soil is very important in agriculture for all the following reasons EXCEPT:

Ans X 1. deciding about immediate irrigation or drainage actions

2. undertaking spraying of herbicides over a large area

X 3. understanding the heterogeneity of fields

4. planning planting patterns to follow

Comprehension:

Read the given passage and answer the questions that follow.

In the late spring of 1930, Philip Rider came to the abandoned lighthouse at the mouth of the river Adder on the Essex coast. He was a painter of birds and of nature. He was afflicted with a hunched back and a deformed, twisted hand. Rider loved all creatures. His heart was filled with pity and understanding. He had mastered his handicap, but he could not master the rejection he suffered because of his appearance. People shunned him as evil. This drove him into seclusion.

One November afternoon, a child approached his lighthouse studio. In her arms, she carried a burden. She was no more than twelve, slender, dirty, nervous and timid as a bird, but beneath the dirt, as beautiful as a fairy. She seemed frightened of the ugly man she had come to see. But, she had heard somewhere in the swamp-land, that this man who lived in the lighthouse had magic that could heal injured things.

She had never seen Rider before and was close to fleeing in panic when she saw him. She stood there staring, but his voice was deep and kind when he spoke to her. "What is it, child?" She timidly moved forward. The thing she carried in her arms was a large white bird, and it was quite still. The girl placed it in his arms. "Is it still alive?" she asked. "Yes. Yes, I think so. Come in, child, come in." Rider went inside bearing the bird, which he placed upon a table, where it moved feebly.

Curiosity overcame fear. The little girl followed and found herself in a room warmed by a coal fire, with many coloured pictures on the walls. The bird fluttered. With his good right hand Rider spread one of its immense white wings. Rider looked and marvelled, and said, "Child, where did you find it?"

"In the marsh, sir. What – what is it, sir?"

"It is a snow goose from Canada. But how in heaven did it come here?"

Concerned, she said, "Can you heal it, sir?"

"Yes, yes," said Rider. "We will try. Come, you shall help me."

There were scissors and bandages and splints on a shelf. He was marvellously deft, even with the crooked hand. He said, "Ah, she has been shot, poor thing. Her leg is broken, and also the wing tip, but not badly. We will bandage the wing closer to her body, so that she cannot move it until it has set, and then make a splint for the poor leg."

"We will call her the 'Lost Princess'. And in a few days, she will be much better." He reached into his pocket and produced a handful of grains. The snow goose opened its round yellow eyes and nibbled at it. The child laughed with delight.

SubQuestion No: 16

Q.16 Which of the following words does NOT describe the girl aptly?

Ans

1. Unkind

X 2. Curious

X 3. Nervous

X 4. Beautiful

Chosen Option: 4

Section: Quantitative Aptitude

Q.1 निम्नांकित तालिका का अध्ययन करें और उसके बाद दिए गए प्रश्न का उत्तर दें। तालिका 2015 से 2019 तक कंपनियों A और B की आय और व्यय (₹ करोड़ में) को दर्शाती है।

वर्ष	ä	जपनी A		कंपनी B
	आय	ट्यय	आय	टयय
2015	110	90	160	120
2016	150	125	180	125
2017	200	140	225	140
2018	240	175	320	275
2019	300	220	360	300

2015 और 2017 में कंपनी B की कुल आय और 2016 और 2018 में कंपनी A के कुल ट्यय के बीच अंतर (₹ करोड़ में) x है। x का मान किसके बीच है?

Ans

× 1 60 और 70

√ 2. 80 और 90

×3. 90 और 100

×4. 70 और 80
