Comprehension:

Read the following passage and answer the questions that follow.

Rajasthan's farmers have been banging plates and lighting fires these days. It is their desperate attempt to scare away the swarms of migratory locusts invading their fields and eating away crops. The pest attack has come as a double blow for farmers already reeling under the impact of the Covid lockdown.

Millions of locusts, covering 1-4 sq km of the skyline, have reached 10 of the state's 33 districts within three weeks of being first spotted on April 30. Last year, yellow locusts had entered India from Pakistan in the second half of May. The attack had originated from Yemen, coming all the way to West Asia and Pakistan and then India, creating havoc in 17 countries en route.

With the harvest nearly over in Rajasthan, the invading population of grasshoppers this May is feeding mainly on sprouting cotton crop sown last month, vegetables and fodder. State officials, though, fear damage to the young millet and moong dal crops due in July and August if the locusts breed.

Flying in through the Pakistan border near Jaisalmer, the locust swarms have infiltrated as deep as Kishangarh in Ajmer district. Locusts can cover 200-250 km in a day if they get wind support. Presently, the dust storms sweeping parts of Rajasthan are aiding their flight. Officials said the Union agriculture ministry's Locusts Warning Organisation (LWO) is in the process of acquiring 60 vehicles with mounted insecticide sprayers from abroad by July. Ten such vehicles were purchased this January.

"Immature pink locusts are very active, which is why they have reached the interiors of Rajasthan [from Pakistan] so quickly," says K.L. Gurjar, deputy director, LWO. Their metabolism slows down during winters, but in summers, they can fly from 4 am to 8 pm, covering long distances and consuming more crops along the way than mature locusts would. The LWO has put 10 insecticide-spraying vehicles on the job in Rajasthan. The Rajasthan government has provided rented tractors, on which insecticide sprayers are mounted, and also the manpower to man them. The Centre-state joint operation has so far cleared a few hundred sq km of fields of the locusts. Preliminary estimates put the loss to crops at a few crore rupees.

State officials say there is an urgent need to contain the pink locusts before they start breeding in the next few weeks. Indiscriminate aerial spraying of insecticides is ill-advised as this can damage crops as well as affect human settlements.

One of the strategies being considered now is to use fixed-wing aircraft for ultra-low volume spraying of chemicals. The state government may request for such aerial sorties by the air force. Drones have limited capabilities as they can carry only about 20 litres of insecticide at a time, making them effective only over small areas.

SubQuestion No : 86

Q.86 The main theme of the passage is:

- Ans
- ☐ 1. the damage done by the locusts
 - ☐ 2. measures for dealing with the locusts
 - ☐ 3. breeding of locusts
 - ☒ 4. invasion of locusts in Rajasthan

Last year, yellow locusts had entered India from Pakistan in the second half of May. The attack had originated from Yemen, coming all the way to West Asia and Pakistan and then India, creating havoc in 17 countries en route.

With the harvest nearly over in Rajasthan, the invading population of grasshoppers this May is feeding mainly on sprouting cotton crop sown last month, vegetables and fodder. State officials, though, fear damage to the young millet and moong dal crops due in July and August if the locusts breed.

Flying in through the Pakistan border near Jaisalmer, the locust swarms have infiltrated as deep as Kishangarh in Ajmer district. Locusts can cover 200-250 km in a day if they get wind support. Presently, the dust storms sweeping parts of Rajasthan are aiding their flight. Officials said the Union agriculture ministry's Locusts Warning Organisation (LWO) is in the process of acquiring 60 vehicles with mounted insecticide sprayers from abroad by July. Ten such vehicles were purchased this January.

"Immature pink locusts are very active, which is why they have reached the interiors of Rajasthan [from Pakistan] so quickly," says K.L. Gurjar, deputy director, LWO. Their metabolism slows down during winters, but in summers, they can fly from 4 am to 8 pm, covering long distances and consuming more crops along the way than mature locusts would. The LWO has put 10 insecticide-spraying vehicles on the job in Rajasthan. The Rajasthan government has provided rented tractors, on which insecticide sprayers are mounted, and also the manpower to man them. The Centre-state joint operation has so far cleared a few hundred sq km of fields of the locusts. Preliminary estimates put the loss to crops at a few crore rupees.

State officials say there is an urgent need to contain the pink locusts before they start breeding in the next few weeks. Indiscriminate aerial spraying of insecticides is ill-advised as this can damage crops as well as affect human settlements.

One of the strategies being considered now is to use fixed-wing aircraft for ultra-low volume spraying of chemicals. The state government may request for such aerial sorties by the air force. Drones have limited capabilities as they can carry only about 20 litres of insecticide at a time, making them effective only over small areas.

SubQuestion No : 87

Q.87 After reading this passage it can be said that it is:

- Ans ☒ 1. a news report
- ☐ 2. an epic
- ☐ 3. a survey analysis
- ☐ 4. a government statement

Comprehension:

Read the following passage and answer the questions that follow.

Rajasthan's farmers have been banging plates and lighting fires these days. It is their desperate attempt to scare away the swarms of migratory locusts invading their fields and eating away crops. The pest attack has come as a double blow for farmers already reeling under the impact of the Covid lockdown.

Millions of locusts, covering 1-4 sq km of the skyline, have reached 10 of the state's 33 districts within three weeks of being first spotted on April 30. Last year, yellow locusts had entered India from Pakistan in the second half of May. The attack had originated from Yemen, coming all the way to West Asia and Pakistan and then India, creating havoc in 17 countries en route.

With the harvest nearly over in Rajasthan, the invading population of grasshoppers this May is feeding mainly on sprouting cotton crop sown last month, vegetables and fodder. State officials, though, fear damage to the young millet and moong dal crops due in July and August if the locusts breed.

Comprehension:

Read the following passage and answer the questions that follow.

When consuming your favourite fruit is forbidden by your doctor or dietician, it is time to find out why rather than trying to have more of it on the sly. Conventional diet advice for weight watchers and diabetics puts mangoes in the red list, and not without reason. Keeping scientific information about mangoes in mind, recommendations about the fruit warrant a re-look. This is because of its impact on body weight, blood sugar and health.

It's true that ripe mangoes are high in carbohydrates, sugars and have a high glycaemic index. One of the seventh most popular fruits worldwide, it provides roughly 80 kilocalories per 100 g (a medium-sized ripe mango would carry about 130-150 calories), which mainly come from carbohydrates (20 per cent).

Due to high sugar content, mangoes are high in calories. But does this mean that diabetics and weight watchers should be banned from having it? The answer is no, if one adjusts for calories, i.e. substitutes it with an equivalent amount of calories and carbohydrates in the meal.

Better still, combine it with a low-glycaemic food. Low glycaemic foods include pulses, legumes, low-fat dairy (milk, curd), vegetables, nuts and seeds. So mangoes can make a safe entry into the diet, if one is able to keep the caloric intake and carbohydrates constant, i.e. take the right amounts. With over 2,500 varieties around the world, the popularity of mangoes clearly lies in its aromatic sweetness. This tropical fruit also can boast of a huge array of impressive health benefits.

The mango is known to be an excellent source of many vitamins such as vitamin C (ascorbic acid), B vitamins (thiamine, riboflavin, and niacin), and Vitamin A (β-carotene). Ripe mangoes generally possess a higher number of phenolics, researchers say. This makes mangoes a good source of antioxidants with anti-cancer and anti-inflammatory properties. With reasonably good fibre content, it provides a good combination of soluble and insoluble fibre. Soluble fibre is good for digestion and its insoluble variant is good for management of blood cholesterol and sugar levels.

But before you start planning a mango party, there is need for caution. Remember that mangoes, being high on sugars, predominantly fructose, should be consumed in appropriate portions. This is true particularly for weight watchers, diabetics and those with high cholesterol levels.

SubQuestion No : 91

Q.91 What advice is given in the passage to the diabetics and weight watchers?

- Ans
- ☐ 1. Do not eat mangoes as it is too high in sugar.
 - ☐ 2. Eat mangoes but balance the intake of vitamins.
 - ☐ 3. Eat plenty of mangoes as it has impressive health benefits.
 - ☒ 4. Eat mangoes but combine it with a low-glycaemic food.

Comprehension:

Read the given passage carefully and answer the questions that follow.

Indian mathematician Nikhil Srivastava, working at the University of California in Berkeley, is among the winners of the Prestigious 2021 Michael and Sheila Held Prize, announced last week by the US National Academy of Sciences (NAS). Adam W Marcus, EPFL (Swiss Federal Institute of Technology, Lausanne) and Daniel Alan Spielman, Yale University, are the other two winners.

"Marcus, Spielman and Srivastava solved longstanding questions on the Kadison-Singer problem and on Ramanujan graphs, and in the process uncovered a deep new connection between linear algebra, geometry of polynomials, and graph theory that has inspired the next generation of theoretical computer scientists," the NAS said in a statement.

An Indian national, Nikhil was born in New Delhi in November 1983 and has attended educational institutions across the world – Syria, UK, Saudi Arabia, and US – as his father was an Indian Foreign Services officer, who has served as the Indian ambassador to Uganda and Denmark. At present, Nikhil is an associate professor of mathematics at UC Berkeley. The Michael and Sheila Held Prize is presented annually to honour outstanding, innovative, creative and influential research in the area of combinatorial mathematics.

SubQuestion No : 96

Q.96 What is the connection between the prize winners and the famous Indian mathematical genius Ramanujan?

- Ans
- ☒ 1. They explained Ramanujan's graphs in solving the Kadison-Singer problem.
 - ☒ 2. The prize winners were all admirers of Ramanujan's great contribution.
 - ☒ 3. The prize winners were all students of Ramanujan.
 - ☒ 4. They solved questions on Ramanujan's graphs that had not been solved for a long time.

"Marcus, Spielman and Srivastava solved longstanding questions on the Kadison-Singer problem and on Ramanujan graphs, and in the process uncovered a deep new connection between linear algebra, geometry of polynomials, and graph theory that has inspired the next generation of theoretical computer scientists," the NAS said in a statement.

An Indian national, Nikhil was born in New Delhi in November 1983 and has attended educational institutions across the world – Syria, UK, Saudi Arabia, and US – as his father was an Indian Foreign Services officer, who has served as the Indian ambassador to Uganda and Denmark. At present, Nikhil is an associate professor of mathematics at UC Berkeley. The Michael and Sheila Held Prize is presented annually to honour outstanding, innovative, creative and influential research in the area of combinatorial mathematics.

SubQuestion No : 100

Q.100 How many mathematicians won the Michael Sheila Prize for 2021?

- Ans
- ☒ 1. Four
 - ☒ 2. Two
 - ☒ 3. Three
 - ☒ 4. One

Question ID : 81616112162

Status : Answered

Chosen Option : 3
